

Nausheen Noor Zaidi

+91 7985339700 | nausheennoorz16@gmail.com | LinkedIn | Github

Software Engineer with production backend experience at Warner Bros. Discovery, specializing in backend systems, developer platforms, and AI infrastructure.

Education

Dr. B. R. Ambedkar National Institute of Technology, Jalandhar

CGPA: 8.45

M.Tech, Machine Intelligence & Automation

2024 – 2026 (Expected)

Shri Ramswaroop Memorial College of Engineering and Management, Lucknow

CGPA: 8.21

B.Tech, Computer Science and Engineering

2020 – 2024

Projects

Rudra AI | Autonomous Multi-Agent Software Engineering Platform

Node.js, TypeScript, Python, FastAPI, PostgreSQL, Neo4j, Redis, Bedrock/OpenAI/Anthropic

- Architected a self-hostable autonomous software engineering platform where eight specialized AI engineering roles collaborate through an event-driven orchestration engine with human approval workflows.
- Built a provider-agnostic model gateway (OpenAI / Anthropic / Bedrock + deterministic offline mock) and a text-directive tool-calling loop, backed by a permissioned MCP runtime giving agents safe, audited filesystem and GitHub access.
- Integrated a Neo4j code knowledge graph and pgvector semantic memory for code-aware reasoning, plus an LLM-as-judge evaluation pipeline scoring agent output against weighted rubrics on every run.

Career Twin | AI Career Copilot

FastAPI, React, TypeScript, AWS Bedrock, LangGraph, sqlite-vec

- Developed a full-stack AI career copilot that unifies GitHub, LeetCode, and resume data into a skills profile driving job matching, resume tailoring, and learning-roadmap generation.
- Engineered a RAG pipeline (AWS Bedrock Titan embeddings + vector search) with a source-diversity re-ranking step to ground chatbot answers in user-specific career data with inline citations, preventing hallucination.
- Built a LangGraph ReAct agent with human-in-the-loop approval (interrupt/resume) for cover-letter drafting, and an ATS resume-tailoring pipeline rendering LLM output into a fixed LaTeX template with keyword-coverage scoring.

Unified Mockserver | AI-Augmented API Virtualization Platform

Next.js, Express, Microcks, Groq LLM, Okta SAML, Docker

- Built an AI-augmented API virtualization platform (Next.js, Express, Microcks) that mocks GraphQL, REST, and AsyncAPI directly from their specs, with a deterministic-first design (faker/schema-mock fallback) so core features work with zero API keys.
- Shipped an AI contract-test generator and a “chaos engineering for API contracts” system – 12 injectable failure scenarios plus auto-generated resilience tests sharing one field validator, proving the suite catches injected breaking changes pre-production.
- Implemented multi-tenant workspace isolation with a namespace-guarded Microcks integration, plus Okta SAML SSO and rate-limited API-key authentication for human and CI/CD access.

Experience

Warner Bros. Discovery

Sep 2025 – Present

Software Engineering Intern

Bengaluru, India

- Designed, developed and tested GraphQL and REST backend services using JavaScript and Node.js across production microservices.
- Took consumer-driven contract testing from proof-of-concept to production implementation across 15+ API endpoints as well as authored the design (ADR) and drove leadership alignment meetings to ensure one team’s API changes couldn’t silently break another’s.
- Drove the legacy JSON Blob-to-GraphQL migration from proof-of-concept through production rollout, improving query efficiency and maintainability.

Technical Skills

AI / ML: LLM Integration (AWS Bedrock, Groq), RAG Pipelines, Vector Search (pgvector, sqlite-vec), Multi-Agent Orchestration (LangGraph), Prompt Engineering, Knowledge Graphs (Neo4j), LLM-as-Judge Evaluation

Backend: Node.js, FastAPI, Fastify, Express.js, Next.js, REST APIs, GraphQL, Microservices, Event-Driven Architecture

Languages: Python, JavaScript, TypeScript, C++, SQL

Data, Infra & Auth: PostgreSQL, Redis, Docker, Docker Compose, AWS (S3, Bedrock), SAML/OAuth2 SSO

Achievements & Publications

GATE (Computer Science) 2024: All India Rank 8399

Publication (Springer Nature, SoCTA 2025): “Drone Detection using Noise Suppressed Acoustic Features in Low SNR Environments”
