Software Engineer with production backend experience at Warner Bros. Discovery, specializing in backend systems, developer platforms, and AI infrastructure.

Education

Dr. B. R. Ambedkar National Institute of Technology, Jalandhar <i>M.Tech, Machine Intelligence & Automation</i>	CGPA: 8.45 2024 – 2026 (<i>Expected</i>)
Shri Ramswaroop Memorial College of Engineering and Management, Lucknow <i>B.Tech, Computer Science and Engineering</i>	CGPA: 8.21 2020 – 2024

Experience

Warner Bros. Discovery <i>Software Engineering Intern</i>	Sep 2025 – Present <i>Bengaluru, India</i>
- Designed, developed and tested GraphQL and REST backend services using JavaScript and Node.js across production microservices. - Took consumer-driven contract testing from proof-of-concept to production implementation across 15+ API endpoints as well as authored the design (ADR) and drove leadership alignment meetings to ensure one team's API changes couldn't silently break another's. - Drove the legacy JSON Blob-to-GraphQL migration from proof-of-concept through production rollout, improving query efficiency and maintainability. - Collaborated with cross-functional teams in an Agile environment through code reviews, sprint planning and feature delivery.	

Projects

Rudra AI Multi-Agent Software Engineering Platform	<i>Node.js, TypeScript, Python, PostgreSQL, Neo4j, Redis</i>
- Architected a self-hostable, distributed software engineering platform with 8 specialized engineering roles (Planner, Architect, Backend, Frontend, QA, Security, Docs, DevOps) coordinated through an event-driven orchestration engine with human-approval gates. - Built a permissioned MCP tool-execution runtime (Fastify) for filesystem, GitHub, and process operations with schema validation, timeouts, retry-with-backoff, and full audit tracing on every call. - Designed the core data layer – PostgreSQL as an append-only event store powering a fully replayable “Engineering Timeline,” a Neo4j code knowledge graph, and Redis pub/sub for live SSE streaming – deployed across a 7-service Docker Compose stack.	
Career Twin AI Career Platform	<i>FastAPI, React, TypeScript, PostgreSQL, AWS Bedrock</i>
- Developed a full-stack AI career platform with JWT authentication, Argon2 password hashing, and Fernet-encrypted credential storage for connected GitHub/LeetCode accounts. - Built resilient REST integrations across 6+ external APIs (GitHub, LeetCode, Adzuna, JSearch, YouTube, ATS career-site scanners) with retry/backoff handling, plus an ATS resume-tailoring pipeline with keyword-coverage scoring.	
Multi-Protocol API Mock Server Platform	<i>Node.js, Express.js, GraphQL, Kafka, gRPC, Microcks</i>
- Designed a service virtualization platform supporting REST, GraphQL, Kafka and gRPC APIs, with schema validation and dynamic request routing. - Improved test coverage across 400+ API operations while simulating 10+ upstream services through one unified platform.	

Technical Skills

Backend & APIs: Node.js, Express.js, Fastify, FastAPI, REST APIs, GraphQL, gRPC, Kafka, Microservices, Event-Driven Architecture, System Design
Languages: JavaScript, TypeScript, Python, C++, SQL
Data & Infra: PostgreSQL, Neo4j, Redis, pgvector, Docker, Docker Compose, AWS
Auth & Security: JWT, OAuth2, Argon2, AES-256 Encryption, Role-Based Access Control
Testing & Tools: Contract Testing (Microcks), Git, GitHub Actions (CI/CD), Jira

Achievements & Publications

GATE (Computer Science) 2024: All India Rank 8399
Publication: “Drone Detection using Noise Suppressed Acoustic Features in Low SNR Environments” – SoCTA 2025, Springer Nature
