Software Engineer with production backend experience at Warner Bros. Discovery, building scalable backend systems, developer platforms and AI-powered infrastructure.

Education

Dr. B. R. Ambedkar National Institute of Technology, Jalandhar	CGPA: 8.68
<i>M.Tech, Machine Intelligence & Automation</i>	<i>2024 – 2026 (Expected)</i>
Shri Ramswaroop Memorial College of Engineering and Management, Lucknow	CGPA: 8.21
<i>B.Tech, Computer Science and Engineering</i>	<i>2020 – 2024</i>

Experience

Warner Bros. Discovery	Sep 2025 – Jul 2026
<i>Software Engineering Intern</i>	<i>Bengaluru, India</i>
- Designed, developed and deployed GraphQL and REST backend services using JavaScript and Node.js across production microservices, contributing to scalable backend infrastructure. - Led the proof-of-concept, architecture design (ADR), and cross-team adoption of a legacy JSON Blob-to-GraphQL migration, presenting the solution to engineering leadership and driving implementation approvals. - Designed and implemented a bidirectional contract testing workflow using Pact and Microcks across 15+ APIs, enabling automated consumer-driven and provider-driven contract validation and improving release reliability. - Built an AI-powered Mock Server using Express.js and Microcks with LLM-assisted scenario generation, reducing dependency on upstream services during backend development and testing.	
The Digital Geek	Sep 2023 – Dec 2023
<i>Frontend Developer Intern</i>	<i>Remote</i>
Built responsive, reusable React interfaces for multiple client-facing applications.	

Projects

Rudra AI Multi-Agent Software Engineering Platform	<i>Node.js, TypeScript, Python, PostgreSQL, Neo4j, Redis</i>
- Architected a self-hostable, distributed software engineering platform with 8 specialized engineering roles (Planner, Architect, Backend, Frontend, QA, Security, Docs, DevOps) coordinated through an event-driven orchestration engine with human-approval gates. - Built a permissioned MCP tool-execution runtime (Fastify) for filesystem, GitHub, and process operations with schema validation, timeouts, retry-with-backoff, and full audit tracing on every call. - Designed the core data layer – PostgreSQL as an append-only event store powering a fully replayable “Engineering Timeline,” a Neo4j code knowledge graph, and Redis pub/sub for live SSE streaming – deployed across a 7-service Docker Compose stack.	
Career Twin AI Career Platform	<i>FastAPI, React, TypeScript, PostgreSQL, AWS Bedrock</i>
- Developed a full-stack AI career platform with JWT authentication, Argon2 password hashing, and Fernet-encrypted credential storage for connected GitHub/LeetCode accounts. - Integrated 6+ external APIs with retry/backoff handling and built an ATS resume-tailoring pipeline featuring automated LaTeX rendering, keyword scoring and secure credential management.	
Unified Mock Server Platform	<i>Node.js, Express.js, GraphQL, Kafka, gRPC, Microcks</i>
- Built a unified API virtualization platform supporting REST, GraphQL, Kafka and gRPC with schema validation, dynamic request routing and realistic mock data generation. - Simulated 400+ API operations across 10+ upstream services, enabling isolated development, faster testing and reduced dependency on external environments.	

Technical Skills

Backend & APIs: Node.js, Express.js, Fastify, FastAPI, REST APIs, GraphQL, Kafka, gRPC, Microservices, Event-Driven Architecture, System Design, API Virtualization
Cloud & DevOps: AWS (ECS, Bedrock, S3), Docker, Docker Compose, GitHub Actions (CI/CD)
Databases: PostgreSQL, Redis, Neo4j, pgvector
Testing: Pact, Microcks, Contract Testing, Datadog, Jira
Languages: JavaScript, TypeScript, Python, SQL, C++

Achievements & Publications

GATE (Computer Science) 2024: All India Rank 8399
Publication: “Drone Detection using Noise Suppressed Acoustic Features in Low SNR Environments” – SoCTA 2025, Springer Nature
